

c1 2. (twice amended) A resin composition comprising a polyether amide block copolymer as a thermoplastic elastomer and from 0.1 to 10 parts by weight, relative to 100 parts by weight of the elastomer, of a glycol or its derivative.

c2 3. (amended) The resin composition according to claim 1, wherein said thermoplastic elastomer has a soft segment composed of a polyether or polyester.

4. (twice amended) The resin composition according to claim 1 or 2, wherein said glycol or its derivative is a compound represented by the following Formula (1):

c3 wherein each of R^1 and R^2 is, identical to or different from each other, a hydrogen atom, an alkyl group, or an acyl group; each of A^1 , A^2 and A^3 is, identical to or different from one another, an alkylene group having 2 or more carbon atoms; each of l , m and n is, identical to or different from one another, an integer of 0 or more, where $l+m+n>0$.

C3

5. (twice amended) The resin composition according to claim 1 or 2, wherein the amount of the glycol or its derivative is from about 0.5 to 6 parts by weight relative to 100 parts by weight of the thermoplastic elastomer.

6. (*unamended*) A molded article composed of a resin composition according to claim 1 or 2.

Attached hereto is a marked up version showing the changes made to the application by this Amendment.
